

The Zistos Audio Module is designed to augment the video image with an amplified audio signal primarily for search, rescue and tactical applications.

Audio Module Features:

- Adds audio monitoring to any existing system
- Compatible with all WalkAbout™ models
- Audio Module connects between any camera body (pole) and any camera
- Measures only 1.2" diameter by 2" long
- Headphones connect to the AV connector of the WalkAbout™

AAM Audio Module

Audio Module Construction:

- Omni-directional microphone
- High gain amplifier
- Audio Processor Circuit to amplify low level sounds and compress high level sounds
- Weatherproof enclosure

Shown between pole and camera

Note: Only the 2.4GHz transmitters/receivers support audio.

The Audio Module (model AAM) is sold as a kit that includes:

- Audio Module
- Headphones with integral volume control
- Headphone cable adapter
- Storage pouch
